levels

As fresh - people of various ages, both sexes,
some healthy, others with a variety of physical
illness are being given substances on a regular
basis to determine effect, which is determined
on an individual basis into periods like death by
the results are used to refine the
of certain substances.

Second floor of area 2 contains 2 distinct areas -
one a classroom type room with blackboards
on which symbols are written, the other a
library type room containing many books, some
of which have red bindings. These books contain
records of people, identified by ~~name~~ numbers
who have been used to determine the
effects of substances being introduced to
their bodies (virus is the push). The
results are obtained by autopsy, entered
into a data bank and used to refine
or restructure future "experiments".

The people used are zombie-like during the
introduction of the substances and
are "AD" like people with no home - no
one cares about them and no one misses them.
AD - like patients in mental institution
